## IN THE CLAIMS

## **Listing of Claims**

- 1. (previously presented) A method for identifying and/or obtaining a compound which inhibits infectivity of a protozoan pathogen, which method comprises:
- (a) contacting an isolated Rhomboid polypeptide and an isolated substrate polypeptide in the presence of a test compound; and
  - (b) determining proteolytic cleavage of the substrate protein.
- 2. (original) A method according to claim 1 wherein the protozoan pathogen is an apicomplexan pathogen.
- 3. (original) A method according to claim 2 wherein the apicomplexan pathogen is selected from the group consisting of Plasmodium, Toxoplasma, Eimeria, Sarcocystis, Cyclospora, Isospora, Cryptosporidium, Babesia and Theileria.
- 4. (previously presented) A method according to Claim 1 wherein the Rhomboid polypeptide is a protozoan Rhomboid protein.
- 5. (original) A method according to claim 4 wherein the Rhomboid polypeptide is encoded by a nucleic acid sequence shown in Table 1.
- 6. (previously presented) A method according to Claim 1 wherein the substrate polypeptide comprises a lumenal domain and a TMD, the TMD having a region proximal to the lumenal domain which comprises one or more of residues 138-144 of the Drosophila Spitz sequence (SEQ ID NO:1, ASIASGA).
- 7. (original) A method according to claim 6 wherein the substrate polypeptide comprises a TMD and a lumenal domain, the TMD having a region proximal to a lumenal domain which has the sequence of residues 138-144 of Drosophila Spitz.
- 8. (original) A method according to claim 6 wherein the substrate polypeptide is an adhesive micronemal polypeptide.

9. (previously presented) A method according to claim 8 wherein the substrate polypeptide is encoded by a nucleic acid sequence shown in Table 2.

- 10. (previously presented) A method according to claim 9 wherein the substrate polypeptide is Ama-1 or CTRP.
- 11. (original) A method according to any one of the preceding claims wherein the substrate polypeptide and the Rhomboid polypeptide comprise ER (endoplasmic reticulum) retention signals.
- 12. (previously presented) A method according to claim 10 wherein the endoplasmic reticulum retention signals are (SEQ ID NO:2) KDEL or K K Xaa Xaa.
- 13. (previously presented) A method according to Claim 1 wherein the substrate polypeptide comprises an extracellular domain having a detectable label.
  - 14. (original) A method according to claim 13 wherein the detectable label is GFP.
- 15. (previously presented) A method according to Claim 1 wherein said Rhomboid polypeptide and said substrate polypeptide are expressed in a host cell from heterogeneous nucleic acid.
  - 16. (previously presented) A method according to Claim 1 comprising the further step of;
- (c) bringing into contact an isolated human Rhomboid polypeptide and a polypeptide substrate in the presence of the test compound; and,
  - (d) determining proteolytic cleavage of the substrate by the human Rhomboid polypeptide.
- 17. (previously presented) A method according to Claim 1 comprising identifying said test compound as a modulator of adhesive micronemal polypeptide cleavage.
- 18. (original) A method according to claim 17 further comprising determining the ability of said test compound to inhibit the invasiveness of a protozoan pathogen.
- 19. (previously presented) A method according to claim 17 comprising isolating said test compound.

20. (original) A method according to claim 19 comprising synthesising the test compound.

21. (original) A method according to claim 19 comprising modifying the test compound to optimise its pharmacological properties.

22. (previously presented) A method according to Claim 17 comprising formulating said test

compound in a pharmaceutical composition with a pharmaceutically acceptable excipient, vehicle or

carrier.

23. (withdrawn) A compound which modulates protozoan pathogen infectivity obtained by a

method of Claim 1.

24. (withdrawn) A compound according to claim 23 comprising a peptide fragment of a

protozoan Rhomboid polypeptide.

25. (withdrawn) A method of producing a pharmaceutical composition comprising;

identifying a compound which inhibits the infectivity of a protozoan pathogen using a method

according to Claim 1; and,

admixing the compound identified thereby with a pharmaceutically acceptable carrier.

26. (withdrawn) A method according to claim 25 comprising the step of modifying the

compound to optimise the pharmaceutical properties thereof.

27. (withdrawn) A method for preparing a pharmaceutical composition for treating a

protozoan pathogen infection comprising;

i) identifying a compound which modulates the proteolytic activity of a Rhomboid polypeptide,

ii) synthesising the identified compound, and;

iii) incorporating the compound into a pharmaceutical composition.

28. (withdrawn) A pharmaceutical composition comprising a compound according to claim 23.

29. (withdrawn) Use of a compound according to claim 23 in the manufacture of a

composition for treatment of a protozoan pathogen infection.

4

- 30. (withdrawn) A method comprising administration of a composition according to claim 23 to a patient for treatment of a protozoan pathogen infection.
- 31. (withdrawn) A method according to claim 30 wherein the protozoan pathogen is an apicomplexan pathogen selected from the group consisting of Plasmodium, Babesia, Theileria, Toxoplasma, Eimeria, Sarcocystis, Cyclospora, Isospora and Cryptosporidium.
  - 32. (withdrawn) A method of identifying a protozoan Rhomboid polypeptide comprising;
  - (a) providing a test protozoan Rhomboid polypeptide,
- (b) bringing into contact a substrate polypeptide and the test Rhomboid polypeptide under conditions in which the substrate polypeptide is normally proteolytically cleaved; and,
  - (c) determining cleavage of the substrate polypeptide.
- 33. (withdrawn) A method according to claim 32 wherein the test Rhomboid polypeptide comprises an amino acid sequence encoded by a nucleic acid sequence shown in Table 1.
- 34. (withdrawn) A method according to claim 32 wherein the substrate polypeptide comprises the lumenal region, of the TMD of Spitz, Gurken, Keren, Ama-1 or CTRP.
- 35. (withdrawn) A method according to Claim 32 wherein the substrate polypeptide comprises an amino acid sequence encoded by a nucleic acid sequence shown in Table 2.
- 36. (withdrawn) A method according to claim 35 wherein the substrate polypeptide is Ama-1 or CTRP.
